PROFESSIONAL SUMMARY

Front-End Developer passionate about building high-quality digital products, with a strong dedication to continuous learning within the React, Next.js, and TypeScript ecosystem. I believe great software comes from collaboration: I enjoy working in teams, sharing ideas, and solving technical and business challenges together with organization and clear processes. I approach my work with the humility of knowing that no one knows everything, paired with the drive to research, learn fast, and stay calm under pressure. My background combines shipping fast, accessible web interfaces with hands-on experience in product discovery, mentoring teammates, Node.js backends, mobile apps, and AI-assisted workflows to add real value to the team.

WORK EXPERIENCE

Full Stack Developer at Codotech *April 2026 – Present*

At Codotech, I take full ownership of end-to-end projects with high autonomy and organization, working directly with clients and stakeholders to understand business needs and collaboratively design technical architectures. I built web and mobile ecosystems using React, Next.js, and React Native (Expo), while also managing Node.js backends with Strapi and deploying to DigitalOcean servers via SSH. On our flagship e-commerce product, I redesigned the entire checkout flow and integrated dynamic shipping calculations to eliminate confusing steps and performance bottlenecks, delivering a much smoother purchasing experience and generating immediate positive feedback from store owners and end users. To ensure rock-solid stability and fast navigation, I implemented caching with TanStack Query and skeleton loading states, eliminating visual layout shifts and redundant backend requests.

Junior Front-End Developer at Mestres da Web *October 2024 – April 2026*

Built a track record of rapid growth and continuous learning over a year and a half, starting as an intern and earning a promotion to a full-time role through strong dedication, code quality, and fast delivery. I focused deeply on the React, Next.js, and TypeScript ecosystem, converting Figma prototypes into responsive, modular interfaces. Following my promotion, I balanced up to four concurrent projects, building real-time features with WebSockets and asynchronous data fetching with React Query. I created a standardized starter boilerplate adopted by other frontend developers on the team to speed up new project kickoffs, and took charge of managing Netlify deployment environments and securing production environment variables. I have always enjoyed supporting the team by mentoring new interns on best practices and collaborating closely with backend engineers to design solid business logic.

EDUCATION

- **Faculdade de Tecnologia de Mogi das Cruzes (FATEC)** Technologist Degree in Systems Analysis and Development (2023 – 2027)

COURSES AND CERTIFICATIONS

- AWS Academy Cloud Foundations (2023)
- Microsoft AI-900 (2023)
- Microsoft AZ-900 (2023)
- Google Cloud Foundations (2023)

LANGUAGES

- Portuguese: Native
- English: Advanced (B2) – 2 years at Cultura Inglesa
- Spanish: Basic/Intermediate
