OBJECTIVE

Front-End Developer with a strong focus on end-to-end projects, participating not only in interface implementation but also in architecture decisions, integrations, infrastructure, and the definition of technical solutions. I have experience leading projects autonomously, acting as the primary responsible person for development, complex problem solving, and alignment between technical and business areas. I have a collaborative profile, thrive under pressure, and focus on understanding customer pain points to deliver scalable, efficient solutions that bring real value to the product.

PROFESSIONAL SUMMARY

Front-End Developer with Back-End experience, working on the development of SaaS platforms, e-commerces, marketplaces, social networks, and corporate systems. My role extends beyond interface implementation, involving active participation in architecture definition, business rules analysis, complex integrations, and technical decision-making.

Throughout my career, I have participated in projects involving payment gateways, real-time systems, role-based access control (RBAC), multi-tenant applications, and integrations with external services. I also have experience transforming Figma prototypes into modern, responsive, and pixel-perfect applications, always prioritizing code organization, scalability, and maintainability.

I possess a systemic view of software development, understanding everything from user experience to backend, databases, infrastructure, deployment, and

production operations. I frequently collaborate with developers, QAs, Product Owners, and stakeholders to transform business needs into scalable and sustainable solutions.

I am recognized for my autonomy, complex problem-solving abilities, fast learning curve, and consistent performance under pressure, maintaining a sharp focus on technical quality, cross-team collaboration, and continuous product value delivery.

PROFESSIONAL EXPERIENCE

Freelance / Independent Contractor – *since June 2026*

Full Stack Architect *May 2026 - Present*

- Leading direct discovery and alignment meetings with clients to map business requirements, define technical scopes, and propose architecture solutions.
- Maintaining full core Front-End development responsibilities with increased ownership and autonomy, ensuring the delivery of high-performance, responsive, and pixel-perfect user interfaces alongside full-stack execution.
- Managing end-to-end infrastructure and deployment, including cloud hosting setup, server access via SSH, domain mapping, DNS configuration, and defining scalable technical/hosting plans tailored to project budgets and requirements.
- Operating autonomously as a high-trust technical partner, designing and building scalable end-to-end applications for clients who rely on my independent execution and technical expertise.
- Overseeing complete project lifecycles, ensuring transparent communication, efficient problem-solving, and the delivery of high-value software that aligns perfectly with client business goals.

Mestres da Web – 1 year and 8 months

Full Stack Developer *February 2026 – May 2026*

- Active participation in the architecture definition and development of scalable SaaS platforms and multi-tenant e-commerce solutions,

contributing to technical decisions, product evolution, and definition of development standards.

- Technical leadership in the migration and integration of payment gateways, implementing webhooks, payment splits, card tokenization, financial reconciliation, and critical transactional flows for the operation.
- Development of role-based access control (RBAC) mechanisms, user management, subscription plans, real-time features, and complex business rules tailored for multi-tenant environments.
- Implementation and protection of APIs, environment variable management, authentication, authorization, and separation of concerns between client-side and server-side, following security and scalability best practices.
- Action in investigating and resolving production issues, log analysis, correcting critical integrations, and maintaining the operational stability of platforms.

Junior Front-End Developer *October 2025 – February 2026*

- Development and maintenance of scalable, responsive, and user-experience-oriented web applications using TypeScript, React, and Next.js.
- Development of administrative panels, B2B systems, and dashboards with complex business rules, advanced filters, large volume data handling, and a focus on performance and usability.
- Implementation of real-time functionalities using WebSockets and external service integrations, participating in the construction of interactive flows and dynamic user experiences.
- Integration and adaptation of third-party libraries, frameworks, and APIs, ensuring compatibility with the application architecture and business requirements.
- Building reusable components, interface standardization, integration with Headless CMS (Strapi), and continuous evolution of Front-End architecture.

Front-End Development Intern *October 2024 – October 2025*

- Collaboration in agile teams alongside Product Owners and QAs in the construction and evolution of web interfaces.
- Transformation of Figma prototypes into responsive and pixel-perfect interfaces, following design, code, and architecture standards defined by the team.

- Participation in the maintenance of production applications, code versioning, deployment processes, and bug fixes identified during the development lifecycle.
-

EDUCATION

- **Faculdade de Tecnologia de Mogi das Cruzes (FATEC)** Associate Degree in Systems Analysis and Development (2023 – 2026 | Expected graduation: December 2026)
-

COURSES & CERTIFICATIONS

Cloud, Artificial Intelligence, and Data (Focus on Microsoft / Big Techs) -

- AWS Academy Cloud Foundations — AWS (2023)
- Microsoft Certified: Azure AI Fundamentals & Data Fundamentals — Microsoft / SENAI (2023)
- Microsoft Azure Fundamentals (Architecture, Services & Governance) — Microsoft (2023)
- Google Cloud Computing Foundations (Data, ML, AI & Infra) — Google Cloud / SENAI (2023)

Full Stack Development & Software Engineering -

- React from Zero to Mastery (Hooks, Router, APIs) — Udemy (2025)
- Node.js Training: RESTful APIs with Express and MongoDB — Alura (2025)
- Backend Training: Java and Python (OOP) — Alura (2025)
- HTTP and Networks: Understanding the Web — Alura (2025)

Security, Governance, and Design -

- Certificação COBIT 5 Foundation (Governança de TI) — Workover Academy (2025)
- Endpoint Security & IT Essentials — Cisco (2023 - 2024)
- PRO Figma: UI Design do Zero ao Especialista — Udemy (2024)

TECHNICAL SKILLS (HARD SKILLS)

- **Linguagens:** JavaScript, TypeScript
 - **Front-End:** React.js, Next.js, Styled-Components, Tailwind CSS
 - **Back-End & DB:** Prisma, REST APIs, Firebase, Strapi, PostgreSQL, Node.js
 - **Infrastructure & Tools:** Vercel, Netlify, GitHub Actions, Git, Figma, SSH
 - **Integrations & Architecture:** Payment Gateway, WebSockets, Multi-tenant, RBAC, SSR/SSG/CSR
-

BEHAVIORAL COMPETENCIES (SOFT SKILLS)

- **Business Vision:** Ability to understand requirements, identify problems, and propose solutions aligned with product goals.
 - **Autonomy:** Conducting technical demands independently, with responsibility and a sense of priority.
 - **Problem Solving:** Investigating failures, debugging, and fixing bugs in development and production environments.
 - **Communication and Collaboration:** Ease of working alongside developers, QAs, Product Owners, and both technical and non-technical stakeholders.
 - **Adaptability:** Fast learner of new technologies, tools, and business rules.
-
